

15.12.2.11 `max(value1, value2, ...)`

Given [one-zero](#) or more arguments, returns the largest of the arguments.

∑ [If no arguments are given, the result is \$-\infty\$.](#)

∑ If any argument is `NaN`, the result is `NaN`.

∑ The comparison of values to determine the largest value is done as in 11.8.5 except that `+0` is considered larger than `-0`.

15.12.2.12 `min(value1, value2, ...)`

Given [one-zero](#) or more arguments, returns the smallest of the arguments.

∑ [If no arguments are given, the result is \$+\infty\$.](#)

∑ If any argument is `NaN`, the result is `NaN`.

∑ The comparison of values to determine the smallest value is done as in 11.8.5 except that `+0` is considered larger than `-0`.
