Notes from August 16-17 meeting with Doug Crockford and Allen Wirfs-Brock

Item	type	Pratap V2 doc item	Proposed resolution	n notes	
line terminator in string literals	IE deviation	2.3	change spec	All impls currently follow JScript	
Trailing comma in array literal	abmigious spec	2.7	change spec, trailing comma ignored	JScript is odd ball, need to verify that change is acceptable	
bindings of function name in function expressions used as function staements	inconsistent extensions/non- conforming implemenations	2.8 2.10	clarify spec., make binding of function name "impl dependent"		
are global functions properties of global object	IE impl error	2.6	change spec to be impl dependent		
catch clause context spec.	ES3 spec error	2.9	fix spec	to mach IE and firefox	
Date parsing	underspecified	3.1	chnge spec using IE impl+ISO from ES4	ISO is a new extension; leave Date.parse alone. Add new parseISO and toISO string methods	
Property enumeration order	inconsistent impls	3.11	change spec	revise spec. to define order for local properties; order for inherited properties remains undefined	
Joined objects	unnecessary spec.	3.12	delete from spec	remove from spec; nobody impls; questionable semantics; lots of complexity	
Enumeriating shadow properties	IE deviation	3.16	no change	What IE does is interesting but violates the spec. Should probably fix IE. User settable dontEnum will help	
octal parse int	impl defineed	3.15		spec. should be tighten-up to get rid of the weird octal option, and simply say that the result is undefined in this special case. Should check what ES4 proposes for this situation.	

Item	type	Pratap V2 doc item	Proposed resolution	notes
function prototype to string	e to string impl defineed	3.17		change from "implementation dependent" to
	- ,			"implementation defined"
Date constructor a	accepting		new feature	if single arguemnt to date constructor is an object with
object literal				year, month, etc. properties, use those properties to
				initalize the new date object. For example, new
				Date({year:2007, month:8})
unreachable code			add clarification in	Doug, do you remember the details of what we
			return, etc.	discussed???
void operator			deprecate	
function name pro	perty		add ala Mozilla	
add function			new feature	
argumentNames p	roperty			
add array/string ge	enerics		add ala Mozilla	
extensions				
add reduce/reduce	eRight to		add ala Mozilla	
array extras				
every place the sp	ec says		change spec	scan spec to identify and fix
an error occurs sho	ould back			
relate to some spe	ecific			
exception type				
need to clarifiy or	unify			
"native object" and	d "built-			
in object"				
Object.prototype.v	valueOf		deprecate	
sort			deprecate, new	deprecate existing sort, define new sort function that
			feature	produces a copy and takes a boolean function as the sort
				function, < is default. Consider also a form with a separate
				key array

Item	type	Pratap V2	Pratap V2 Proposed resolution notes	
		doc item		
Date methods			change spec.	all specifications need to be clarifed to make the argument ranges explicit
Bring back String.substr	Appendix B		undeprecate	
Bring back Date.getYear()	Appendix B	_	undeprecate	with correct Y2K definition
