2 Meeting Terms of Reference

Ecma (the stewards of the ECMAScript Programming Language Standard) is considering a project to develop a secure programming language that would be the successor to ECMAScript.

Yahoo is organizing a one day workshop in Sunnyvale, California on this subject. Douglas Crockford, chair of the ad hoc of TC39 that is responsible for developing a plan for the project, is inviting people who are currently doing work with secure JavaScript subsets or who have extensive experience in object capability systems or language design. This workshop will give us an opportunity to expose our designs to some of the best people in the field. The goal of the workshop is to develop the goals and design rules for the Ses (Secure ECMAScript) Project.

The workshop will be held on Thursday, August 28, in Building E of Yahoo!'s campus in Sunnyvale, California. We will begin at 10am. Lunch and dinner will be provided.

We want to allocate blocks of time for presentations on existing work on safe JavaScript subsets or object capability languages. The remainder of the meeting will lay the ground work for developing a formal proposal to present to Ecma.

This will be interesting and important work. I hope that you can attend. Please contact Doug at your earliest convenience if you will be participating and if you intend to make a presentation.
