ICT specifications proposed for Identification

Pursuant to art 9 of the Regulation on European standardisation policy, the Commission services propose following set of ICT specifications for "identification".

Further to the agreement of the Platform; the identification files will be prepared for each proposed ICT specification and the corresponding information sheet will be completed.

	Name	SDO
1	Business area	
2	Interconnection	
	HTTP	IETF
	FTP	IETF
	IPv4	IETF
	IPv6	IETF
	802.11(WiFi)	IEEE
3	Data Integration	
	XML	W3C
4	Information access and presentation	
	JPEG	
5	Web services	
	SOAP	W3C
	UDDI	OASIS
6	Security	
	SAML	OASIS
	SOAP	W3C
7	Application architecture	
	Ecmascript	ECMA

Notes:

1. The proposed ICT specifications above are listed by several National Interoperability framework related lists; the versions of the specifications

need, however, to be identified. The National Interoperability initiatives do not necessarily reference the same versions.

2. The specifications on the above list are considered not to be controversial.
3. Complex families of specifications have not been included in the proposed list.
4. The Market relevance of the specifications needs to be indicated, it will most probably relate to the version of the specification referenced in the above list.
5. The list is organised on the basis of a specific structure; could this structure also be used for the presentation of the standardisation activities covered by the new ICT standardisation work programme?
