

ES6 Rev27

Added %IteratorPrototype% that all built-in iterators inherit from.

Issue: should %IteratorPrototype% define a @@iterator method

- Definition: Return this value
- Currently defined in %GeneratorPrototype% and in the prototype for all built-in iterators.
- https://bugs.ecmascript.org/show_bug.cgi?id=3104

Other Rev27 Changes from Last TC39 Meeting

- Destructuring now performs `ToObject` on values to be destructured.
- Array and generator comprehensions removed from language
- Removed specification of `Reflect.Realm`
- Revised `@@unscopable` semantics as per last TC39 meeting
- `Object.assign` ignores `null` and `undefined` source arguments
- Made it an error to reentrantly enter a generator via `next/throw/return`.
- `String(aSymbol)` now returns the symbol's description. Does not change `ToString(symbol)` throwing ever where else.
- `aSymbol == Object(aSymbol)` now is true, just like other wrappable primitives, see bug: https://bugs.ecmascript.org/show_bug.cgi?id=3066
- Tighten specification of when `Array.prototype.sort` is implementation defined

Other Rev27 Changes from Last TC39 Meeting (cont)

- Added 16.1 that lists forbidden extensions.
- Removed all explicit poison pill methods on functions (except for Function.prototype) and added 16.1 restrictions on such extensions.

Other Rev27: New Issues Addressed

- Made it an error to reentrantly enter a generator via next/throw/return.
- String(aSymbol) now returns the symbol's description. Does not change ToString(symbol) throwing ever where else.
- aSymbol == Object(aSymbol) now is true, just like other wrappable primitives, see bug:
https://bugs.ecmascript.org/show_bug.cgi?id=3066
- Tighten specification of when Array.prototype.sort is implementation defined
 - <http://esdiscuss.org/topic/array-prototype-sort-order-and-moment-of-the-get-set-calls>
