

Module Primordials

Man of Straw

Kris Kowal

For ECMA TC-39, January 27-28 2010

* grammar

* primordials

* why

Grammar

```
import id [from pkg]opt [with scope]opt
```

```
(import id)
```

```
require(id)
```

```
(import id from pkg)
```

```
require(id, pkg)
```

```
(import id with scope)
```

```
load(id) (scope)
```

DESUGAR: CALL A MAKER FROM THE CURRENT PACKAGE

```
(import id from pkg with scope)
```

```
load(id, pkg)(scope)
```

DESUGAR: CALL A MAKER FROM AN EXTERNAL PACKAGE

Primordials

```
new Context ( )
```

CREATE A NEW EXECUTION CONTEXT; THIS IS THE INTERFACE

```
let RhinoContext =  
    Packages.org.mozilla.javascript.Context;  
let rhinoContext = new RhinoContext();  
rhinoContext.initStandardObjects();
```

```
new Module(  
    text,  
    fileNameopt,  
    lineNoopt  
)
```

```
new Function(  
  ...args,  
  text,  
  fileNameopt ,  
  lineNoopt  
)
```

```
new Module(  
  ...args,  
  text,  
  fileNameopt ,  
  lineNoopt  
)
```

```
new Module(  
  text,  
  fileNameopt,  
  lineNoopt  
)
```

```
module(  
  scopeopt,  
  loadopt,  
  requireopt,  
  contextopt  
)
```

MODULE CONSTRUCTOR

MODULE FUNCTION

```
let f = new Function("x", "y", "return x + y");  
let z = f(10, 20);
```

```
let m = new Module("return x + y", "m", 1);  
let z = f({"x": 10, "y": 20});
```

```
let m = new Module("import 'm'");  
m.dependencies[0][0] == "m";
```

```
array [                                [
    array {                             [id, pkg],
        string id;                       [id, pkg],
        any pkg;                          [id, pkg]
    };                                     ...
] dependencies;                          ]
```

Roadmap

- * `require, exports, module`
- * Migration: `<script>able modules`
- * `Context, Module, import, export`
- * Migration: `require, exports, module`

Why

- * frozen globals vs.
mutable globals vs.
isolated worlds
- * singleton modules vs.
e-makers
- * require, exports, module vs.
import, export
- * return promises vs.
alter exports object
